## Design Variety

The variety in shape, size and color of segmental precast concrete pavers results in many design opportunities. The units by default result in a visually stimulating surface that can vary in scale, colors, patterns and can be combined in various ways in order to emphasize or mark certain aspects of a design. Variety can be achieved in several ways including;

### PATTERN

Many of the unit shapes can be combined in various patterns to suggest movement, emphasize a design element or suggest different zones of use. The small size and easy manipulation of the units also supports the possibility of constructing large scale mosaics.

### COLOR

Units can vary in color within a design in order to provide visual cues for different uses or to alter the scale of a very large horizontally paved area. Since the units are colored throughout, they will never need to be "repainted".

### COMBINED USES

Additional design variety is possible by combining various basic unit shapes and colors to provide a surface that varies in scale as well as function. The variation in pattern can suggest zones of use as well as support a transition in scale from one area to another.
